

Welcome to Jek's Star Wars CCG Inventory Manager

This tool is designed to help you track your card inventory, manage virtual cards, organize your decks, and see where all your cards are allocated. The overall utility of this tool is predicated on the user getting their inventory of physical cards into the system, as such reach out for help. I have created a Google sheet that you can enter your card inventory, and export to this tool. Even if you don't want to use that sheet, whatever your current system is, I want to help get it into this tool, reach out, I will do my best to get your card counts in the system. If you encounter any bugs or questions please send them my way. Thanks for your support, and supporting Star Wars CCG!

Google Sheet for Inventory Import: [📄 SWCCG Inventory Manager Count Sheet](#)

Overview of the Inventory Manager

My Collection:

- Keep track of all your physical cards
 - Know how many of each card you have, and what variant (white border, foil, ect.) the cards are.
 - Sort by set, type, and see what decks your cards are in.
 - See if a physical card is being used as a backing card.
- Keep track of all your built virtual cards
 - Know what virtual cards you have built, and what backing card was used for each.
 - Get updates when a virtual slip is out of date due to an errata, know when to reprint your slips.
 - See what decks your built virtual cards are in.
- Import your collection from the inventory spreadsheet, or other counts.
 - Anything from a polished excel sheet to a handwritten tally of your cards, Jek will work with you to make sure it gets uploaded.
- Physical and virtual cards can also be added manually if you acquire singles or slips, no need to rebuild a database for a few cards.

My Decklists:

- Import a decklist from GEMP, or the Tournament Decklist website.
- Can be imported with, or without cards outside of deck.

My Decks:

- Build a deck from an imported decklist
 - Allocate physical and virtual cards from your collection.
 - Generate a task list for virtual cards that need to be printed.
 - Generate a task list for physical cards you may be missing.
 - Track moving cards between built decks.
- Edit an existing built deck
 - Change or remove cards as you tune your built deck.
 - Get reports of your actions so you can track where your cards are at.
 - Automatically update your collection to always know where your cards are.
- Rebuild an existing built deck
 - Select an existing deck and a different decklist to get a list of what cards to remove and add.
 - If new virtual cards are needed, update your task list to make them.
 - Get summaries of what your built decks are for a quick view of the decklist and the backing cards for your virtual cards in the list.

My Tasks:

- V-Slips to Print
 - See any virtual cards that need slips printed.
 - Export the list in a format that can load directly into the Vkit.
- V-Slips Needing Reprinting
 - A list of any slips that have had an errata since you created them.
 - Export the list in a format that can load directly into the Vkit.
- Missing Physical Cards
 - A list of physical cards you need to complete a deck you built.

Account Settings:

- Change your password.
- Export all of your collection, decklists, and decks.
- Delete all (or some) of your data.
- Import all (or some) of your data from a saved export.
